RULOMATİK COMPANY

Rulomatik is a technology and manufacturing company specializing in automated vending solutions and proprietary consumable products. Headquartered in Bursa, Türkiye, the company brings together engineering, electronics, mechatronics, software, manufacturing and logistics under an integrated operational structure.

Since developing its first Car Drying Towel Vending Machine in 2013, Rulomatik has continuously expanded its technology, product portfolio and international presence. Today, Rulomatik solutions serve customers across multiple countries and cities worldwide.

Rulomatik designs and manufactures automated vending machines for applications including car drying towels, car floor mats, gym towels, beach towels and other specialized products. The company also develops the consumable products used within its vending systems, creating an integrated machine-and-consumables business model.

From product development and manufacturing to software, quality control, technical support and international logistics, the entire Rulomatik ecosystem is managed through a centralized global structure based in Bursa.

GLOBAL TECHNOLOGY & MANUFACTURING
Engineering, manufacturing and international operations developed for global markets.

IN-HOUSE EXPERTISE
Product development, electronics, mechatronics, software, manufacturing and brand management under one organization

LONG-TERM EXPERIENCE
More than a decade of experience in vending technology and automated product distribution.

16 patents

Rulomatik technologies and products are protected by 16 international, continental and regional patents, supporting the company's focus on proprietary innovation and product development.

MANUFACTURING & OPERATIONS

Rulomatik operates its production, assembly, technology development and international logistics activities from its headquarters and manufacturing infrastructure in Bursa, Türkiye.

RULOMATİK® TRADEMARK

RULOMATİK® is a registered trademark of:

Rulomatik Elektronik Sanayi Ticaret Limited Şirketi

The company manages the development, production, international commercialization and brand operations of Rulomatik products and technologies.

GLOBAL MANUFACTURING, INTERNATIONAL VISION

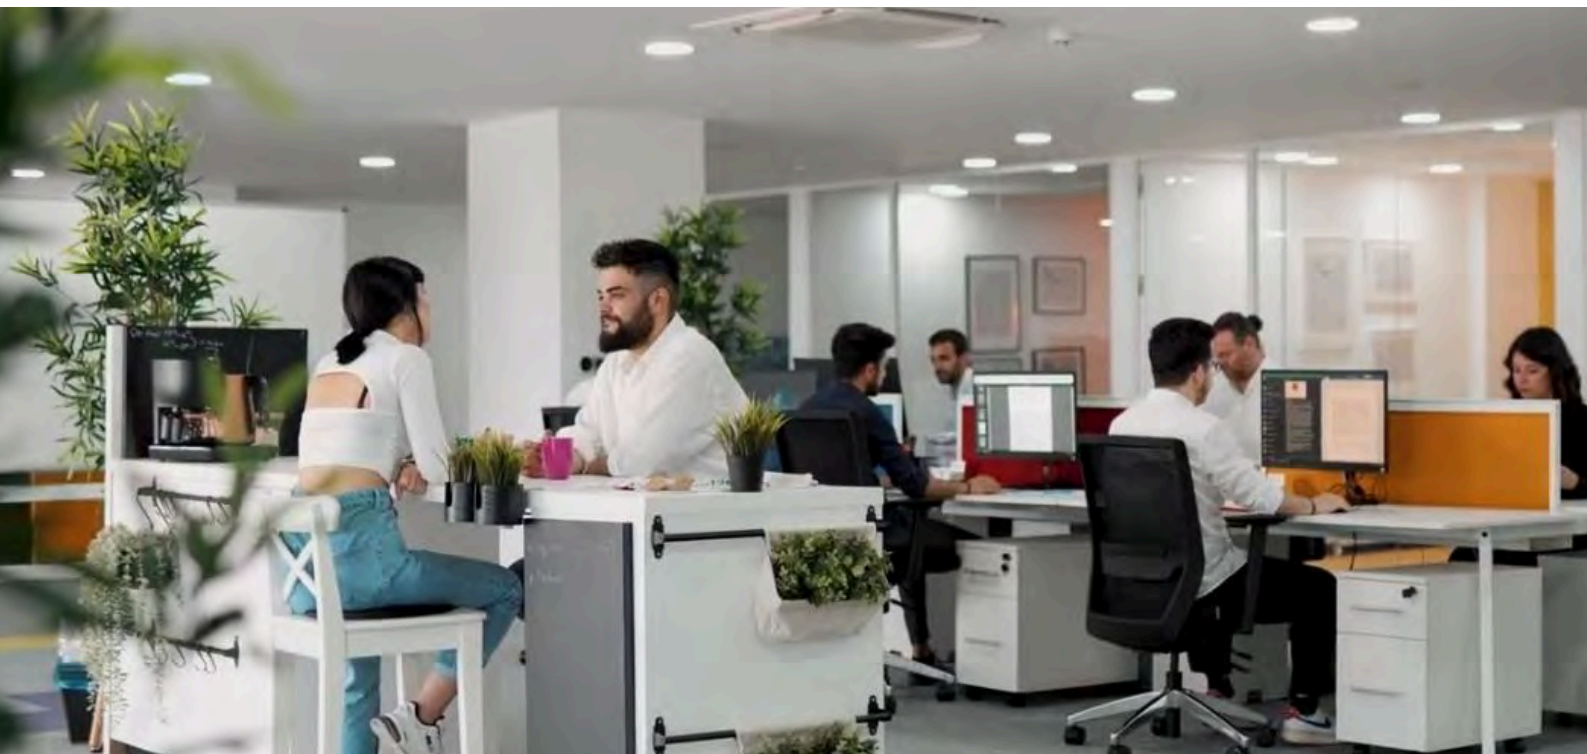

Rulomatik is a technology-driven manufacturing company focused on developing automated vending solutions and proprietary products for international markets. With more than a decade of experience, the company continuously strengthens its engineering, manufacturing, software and operational capabilities to deliver reliable and scalable solutions for customers and business partners worldwide.

A GROWING GLOBAL PARTNER NETWORK

Rulomatik works with business partners across international markets to introduce its technologies, products and vending solutions to new regions. Through its global expansion model, the company supports local market development with product know-how, technical infrastructure, training, brand standards and long-term operational support. Our objective is to build sustainable partnerships that create long-term value for both Rulomatik and its international partners.

BUILT FOR INTERNATIONAL MARKETS

Rulomatik develops its products with the requirements of international trade, logistics and local market adaptation in mind. From product development and manufacturing to technical support and global operations, our teams work within an integrated structure designed to support international growth. We believe sustainable global expansion depends on strong products, reliable systems, responsible partnerships and continuous innovation.

INNOVATION THAT CREATES REAL VALUE OUR COMMITMENT TO CONTINUOUS IMPROVEMENT

At Rulomatik, innovation is not limited to developing new products. It is a continuous process focused on improving performance, usability, reliability and operational efficiency.

We continuously refine our machines, software, production methods and consumable products based on field experience, technological developments and the evolving needs of international markets.

Our goal is to help our partners operate with more efficient systems, stronger product performance and a business model that can adapt to changing market conditions.

CONTINUOUS IMPROVEMENT IS PART OF OUR CULTURE

We believe that successful products must continue to evolve. For this reason, Rulomatik continuously reviews and improves its technologies, product designs, software, production processes and service standards.

Each new generation is developed with one objective: to make our solutions more reliable, more efficient and more valuable for our customers and partners.

DESIGNED AROUND PERFORMANCE

Ergonomics, functionality and practical use are at the center of our product development process.

Every Rulomatik solution is developed with a focus on:

- Reliable daily operation
- Ease of use and maintenance
- Consistent product performance
- Efficient resource use
- Adaptability to different markets and operating conditions

Our engineering approach combines real-world experience with continuous product development.

STAY AHEAD WITH RULOMATİK

At Rulomatik, innovation and quality are developed together. Every new product, system and improvement is shaped by real operational experience, customer expectations and the requirements of international markets.

Our objective is not simply to follow existing standards, but to continuously improve the performance, reliability and usability of our solutions.

From product design and material selection to manufacturing, software and field performance, every detail is approached with a long-term perspective.

QUALITY BUILT INTO EVERY STAGE

Quality is not limited to the final inspection of a product. Rulomatik integrates quality control throughout the development and manufacturing process, including engineering, component selection, production, assembly, testing and final verification.

Our teams continuously evaluate product performance to help ensure consistent operation across different markets and operating conditions.

ENGINEERED FOR RELIABLE PERFORMANCE

Research, product development and continuous testing play an important role in the evolution of Rulomatik products. Materials, electronic systems, mechanical components and software are selected and developed with a focus on:

- Reliability
- Durability
- Consistent performance
- Ease of operation
- Long-term serviceability

The result is a product ecosystem designed to support customers and business partners throughout the entire operational lifecycle.

OUR APPROACH TO ENVIRONMENTAL RESPONSIBILITY

Use environmentally friendly materials

Prevent waste

Provide recycling

Dispose of irreversible ones regularly

OUR BUSINESS PRINCIPLES

Rulomatik builds its business relationships around long-term cooperation, continuous improvement and responsible growth.

We develop integrated solutions rather than focusing only on individual products, combining machines, consumables, technology and operational support within a complete ecosystem.

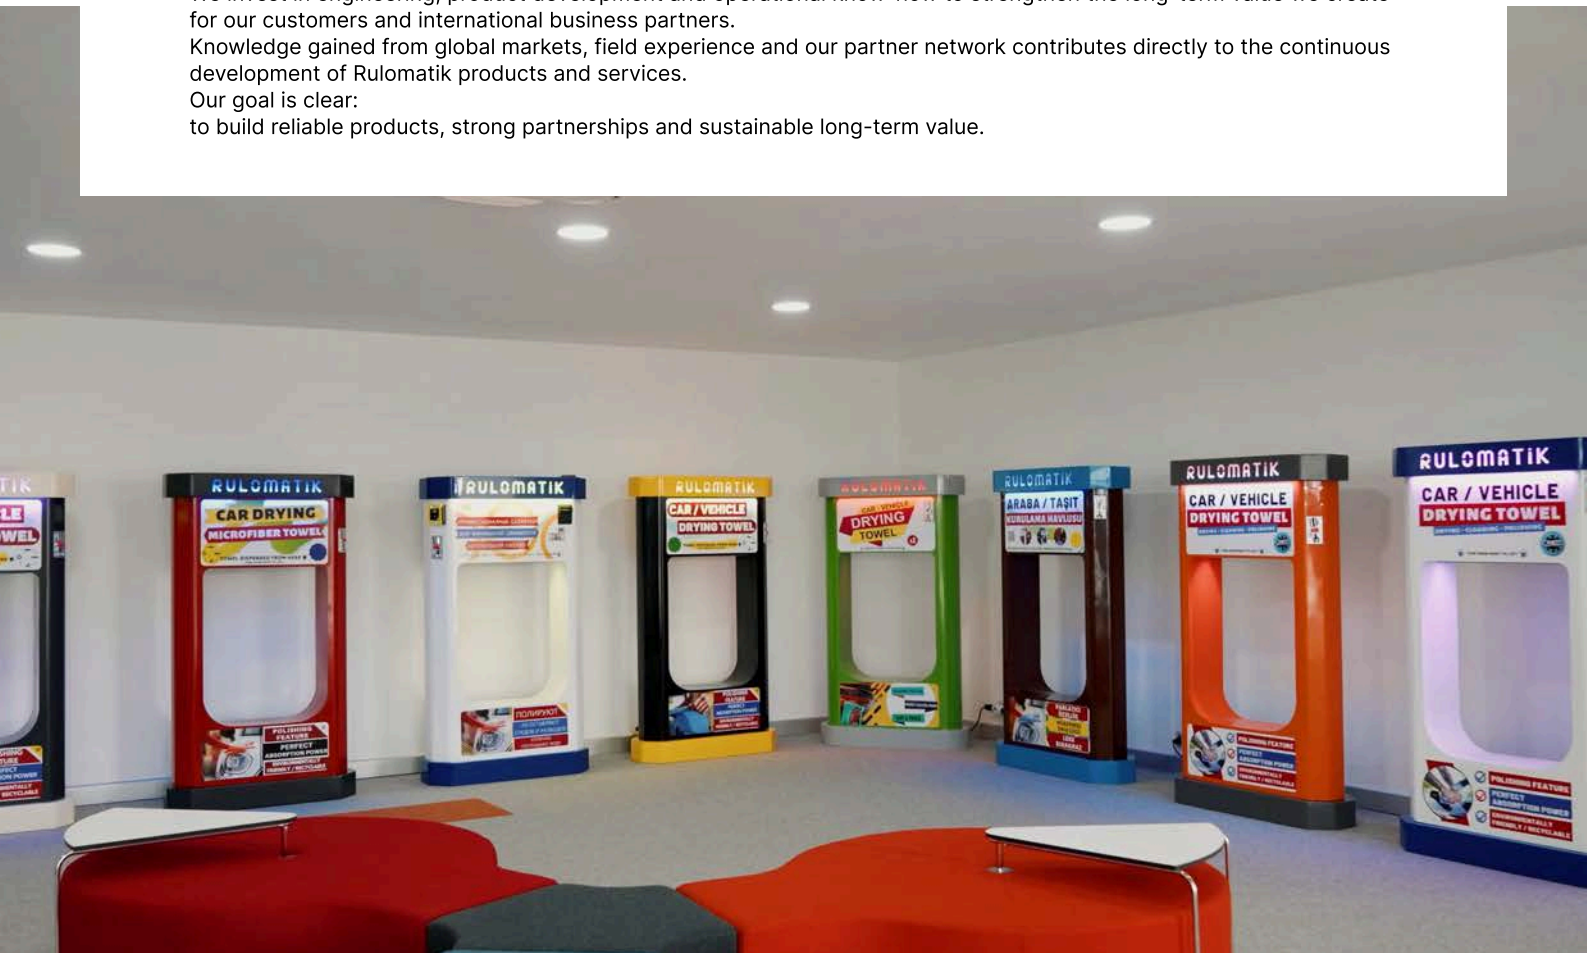

We continuously improve our products and systems in line with changing customer expectations, market requirements and technological developments.

We invest in engineering, product development and operational know-how to strengthen the long-term value we create for our customers and international business partners.

Knowledge gained from global markets, field experience and our partner network contributes directly to the continuous development of Rulomatik products and services.

Our goal is clear:

to build reliable products, strong partnerships and sustainable long-term value.

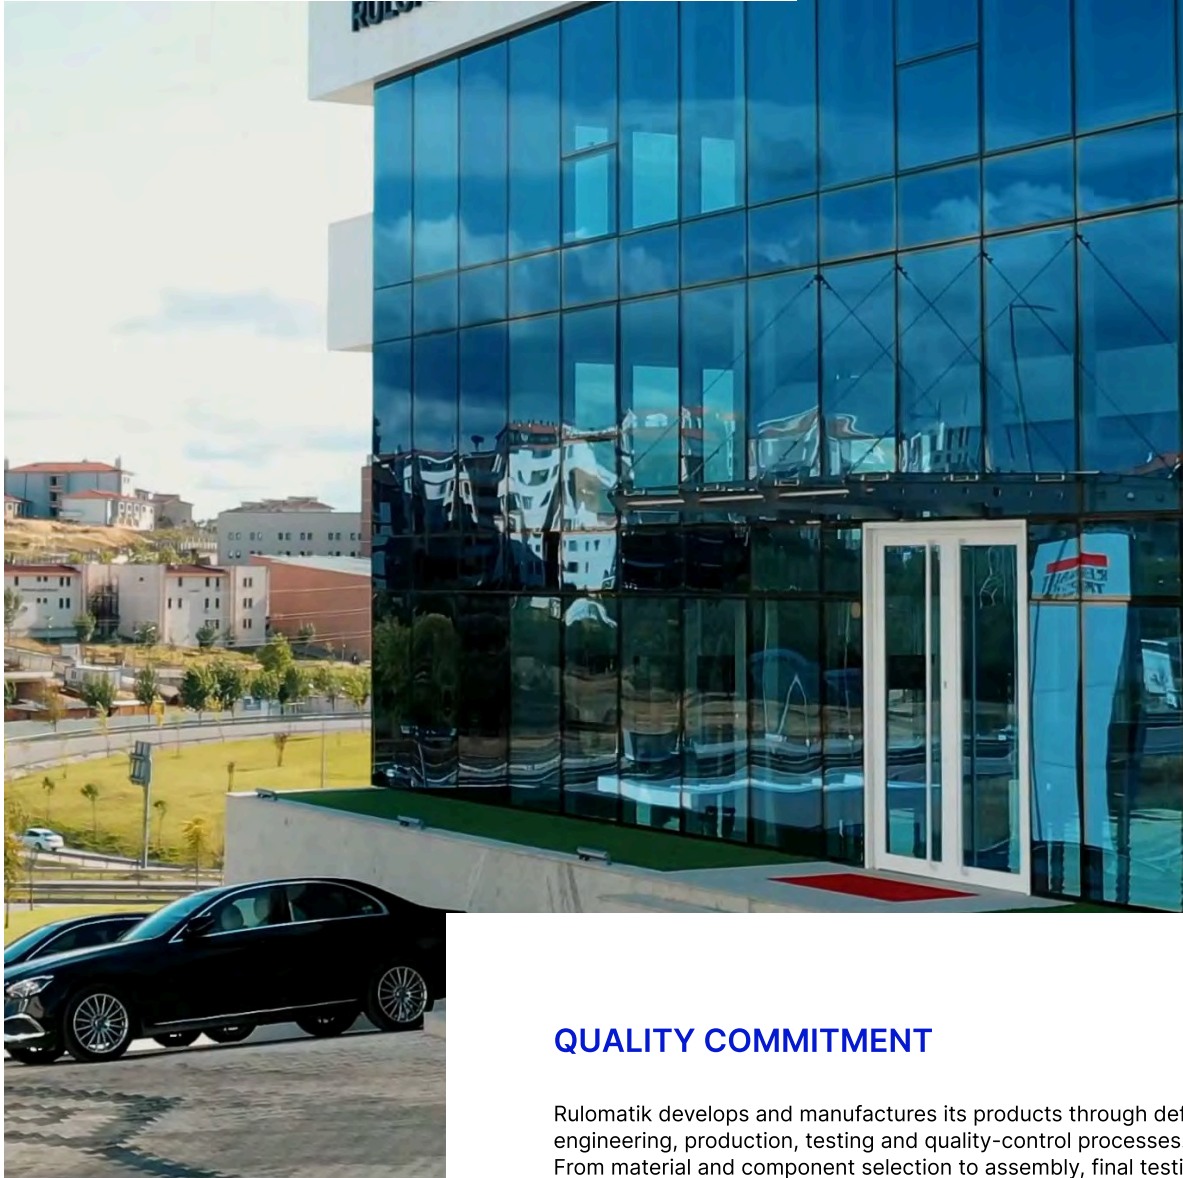

SOCIAL RESPONSIBILITY

At Rulomatik, we conduct our business with respect for our employees, customers, suppliers, business partners and the communities in which we operate.

Our approach to social responsibility is based on responsible business practices, ethical conduct, continuous improvement and long-term value creation.

We aim to maintain a working culture that supports people, encourages professional development and strengthens cooperation across our organization and partner network.

QUALITY COMMITMENT

Rulomatik develops and manufactures its products through defined engineering, production, testing and quality-control processes. From material and component selection to assembly, final testing and delivery, each stage is managed with a focus on product reliability, consistency and long-term performance. Our quality approach is supported by continuous product development, technical testing and the improvement of manufacturing processes.
